MECHANICAL ATOMIZATION

with viscosity up to 400 cSt at 50°C (50°E at 50°C)

GAS/HEAVY OIL

These models of burners represent the most powerful aluminium version of the KR series. Thanks to their independent electric motor for the activation of the oil pump, they can burn gas and heavy oil separately. In fact, during gas firing, the oil pump motor does not operate and remains off.

These burners are, therefore, provided with an UV photocell to control the flame during the operation.

They are, therefore, provided with a pre-heating tank equipped with low thermal load electrical resistance to ensure oil fluidity. All burners with progressive or modulating operation, have been built to burn fuels whose standard viscosity is 400 cSt at 50°C (50 E° at 50°C).

Oil pump set (pump, motor, oil tank and filter) is included, (not assembled on the burner)

GAS/HEAVY OIL

MECHANICAL ATOMIZATION
with viscosity up to 400 cSt at 50°C (50°E at 50°C)

Monoblock burners 2000 series are supplied complete with a steel supporting frame; burner installation and manutention are greatly simplified.

The frame is equipped with wheels to easily move the burner, and its height is adjustable to match any type of boiler or furnace.

Attention: the graph shows the value of the gas output (kW) against the corresponding pressure without the combustion chamber back pressure. To know the minimum gas pressure at gas train, in order to get the gas output, it is necessary to add the boiler back pressure to the value read on the curve.
