

# miniflam SERIES HS5 HS10 HS18

GAS/LIGHT OIL

This small output series can work both with gas and light oil according to the fuel availability on the plant.

Clearly all mechanisms have been carefully studied to give the maximum efficiency and are perfectly compatible to work with gas and liquid fuels; in fact fuel change over is simply achieved by a single electrical switch which prompts the burner to carry out a controlled shutdown.

The high performance fuel pump is driven by a separate motor running only when oil firing is selected.

Moreover, thanks to its small dimensions, this series is particularly suitable to a quick maintenance. The burners' features are: an housing made in aluminium die-cast, the cover can be easily taken off, a grill on the air inlet prevents any foreign object being drawn into the fan. The combustion head can be adjusted by means of a graduated screw.

Approximate values

Attention: the graph shows the value of the gas output (kW) against the corresponding pressure without the combustion chamber back pressure. To know the minimum gas pressure at gas train, in order to get the gas output, it is necessary to add the boiler back pressure to the value read on the curve.
